CLINICAL FACIALS: Improve skin tone and texture

Our signature clinical facial includes a deep pore cleansing, steam extractions, and a Japanese mushroom enzyme peel followed up with an actizyme renovation mushroom mask. Custom designed and safe for a variety of skin types, dry, normal, oily, combination, acne prone and sensitive. This treatment will improve your complexion and leave your face glowing and fresh.

Fee: \$95

MICRODERMABRASION: Refine and smooth your skin

With the use of a medical grade microdermabrasion machine the top layers of your skin are gently exfoliated to increase the blood flow to the skin surface and to encourage cellular turnover. This treatment is used to repair sun-damaged skin and to improve skin tone and texture on the face, neck, décolletage, and hands. To maximize your results a series of 3-6 treatments is recommended.

Fee: \$100

GLYCOLIC ACID PEEL: Fight the effects of time, sun damage and environmental toxins

This gentle but effective chemical peel will loosen the unproductive top layers of the skin and help improve the skin's clarity and minimize the appearance of fine lines and wrinkles. Chemical peels can also improve the appearance of scarring, reduce freckles and age spots, and even treat certain kinds of acne. For best results a series of 4-6 treatments is recommended.

Fee: \$140

ILLUMINIZE LACTIC ACID PEEL: Brighten your skin with minimal downtime

The Lactic acid peel is used to reveal the look of more youthful skin and to minimize the appearance of mild skin imperfections such as fine lines, sun damage and pigment irregularities. A series of peels is recommended for best results. Sun protection products are mandatory between peels.

Fee: \$125

VITALIZE PEEL: Exfoliate, improve clarity and minimize fine lines with very little downtime

A little more aggressive than an Illuminize peel, this treatment is used to improve mild to moderate skin imperfections including hyperpigmentation, acne scarring, melasma and fine lines and wrinkles. Patients will generally experience moderate peeling two to three days after the procedure that will last for three to five days. This type of peel can be repeated every three to four weeks and sun protection is required between treatments.

Fee: \$175

SUFFUSION: Rejuvenate and defend against aging

During this add-on procedure an ultrasound wand is used to massage and penetrate the skin with Revisage restorative gel, to help increase antioxidant levels and to protect against free radical damage. Suffusion can be used after a microdermabrasion treatment, a chemical peel, or a facial. It is an effective tool in skin protection and maintenance.

Fee: \$50
